Essays by students at the Chikhale Ashram Shalla

Focus Question:

Energy Management

This photo-essay tells ways my family, our school and the people in our community use energy and recycle stuff.

Boiling water on fire

Student #115, 11th Grade Male & Student #196, 11th Grade Male

We are talking about energy use. Everyone would like to have energy for better use. When we at home at that time we use fire to make our food, meal and other necessary things. Before invention we were not aware about energy and how to use it .But population is increasing day to day and now we are understanding how important energy is!

We must save energy or at least try to use it for good cause. When we at home we must see that the energy we are using not going wastage. If we could found it so immediately try to solve the growing problem. In our home we always try to turn off all equipment when we don't have need of it.

We use different types of things like fan, t.v, and freezer and so on. We don't have these things in ours house even if I would like to tell you if you have these things so try to start them whenever need. In India in rural area most of people use wood to make their evening meal and other uses. So we must use energy proper way for brighter future. This picture tells us condition of rural area from India. A man is boiling water over fire and using it he will bath and will get ready for his work. At the end we would like to tell you that use energy proper way and live long.

Student #173, 11th Grade Male & Student #121, 11th Grade Male

This picture is taken beside our school farm. We don't have farm even if we both know how to use generator on the well. Farmer in India usually tries to do best farming and get more income on his crops.

Around our school farmer has planted so many crops in his farm and it is totally depend over rain. If there were no rain it damage crops. In India electric power problem is increasing rapidly. Load shading is also biggest problem in front of the entire farmer so using generator they overcome entire problem. When power turn off farmer start generator watering the plants and crops.

Power is very important in our life .so we care that ii is not going wastage and try to save it. We must watch out that our community is using it proper way. We must make aware them about it. We must take care of energy when we live in the school. Energy is the need of time so use it carefully

Student #76, 11th Grade Female & Student #163, 11th Grade Female

We both are science students and experiencing lot of fun in global classroom. It is very wonderful days that we are talking each other through Skype. I have never taken such kind of experiencing earlier but now this opportunity has given us global classroom.

Energy is valuable for all of us and it is our duty to save it. We must save power in our house as well in public places. We must run initiative like saving energy in school and the places where it is needed. Our school is situated in school chikhale village it is rural area and people don't know how to use energy and what to do to save energy. We must use energy carefully.

In rural area people don't use a lot of energy and they don't have things which the urban people have like ac, freeze, cooler, mixer and the things which they think they must have them. The above picture is taken around the chikhale village. It is called solar light which turn on in the evening and turn of early in the morning. In chikhale village it is installed by the people. It saves electric power. We must attract people toward this project. This is the time to take action and save energy.

Student #102, 11th Grade Female & Student #103, 11th Grade Female

You will surprise that what we are going to explain to you on above picture. Friends we have some gifted energy we know but we are not aware about them. In urban area usually in aristocratic family ladies use washing machine to wash their clothes and use lot of electric power.

Because they have all the facilities and they have money to expense on these costly things. But in rural area people don't have money to spend on these things. Middle class women who stretch like elastic to feed and meal their children. What she does? She washes all the clothes and dries it outside using the ray of sun.

It is the powerful energy which we get from the sun without cost and it's save lot of power. Sometime in public sector no one think that whether the power is going wastage or not but it is our duty to save power for our next generation. Sometime we forget what we have and run for the things which we don't have in our hand. So we must use energy whenever we needed but must save it.

Student #213, 11th Grade Male & Student #214, 11th Grade Male

We are studying 11<sup>th</sup> Science faculty

This picture is our school we leave in this room we always save to energy here is producing to all facilities in our school we use to energy at night-time we want to sometime days also use. Otherwise switch off to press button advice to others student also. Energy is most important in our life. Energy use to so many ways in our life.

our school have bore well switch on 1-2 time per days there use to drink of water we store to water tank through supply to tap. Our school have one TV that uses to only Sunday all student come to hall watch there. We check up electric metre after 2-3 month it may be come to some problem in electric metre.
